Regulatory framework for disclosure

HSBC Bank plc – Johannesburg Branch ('HSBC JOH' or 'the branch') is supervised by the Prudential Authority of the South African Reserve Bank, which receives information on the capital adequacy of, and sets capital requirements for South African banks and local branches of foreign banks. The capital requirements are calculated based on the various regulations relating to financial services, including the Basel Capital Accord (Basel) III. The Basel Committee's framework is structured around three 'pillars': the Pillar 1 minimum capital requirements and Pillar 2 supervisory review processes are complemented by Pillar 3 disclosure requirements (to exert 'market discipline' through common and granular risk disclosure). The aim of the Pillar 3 disclosure framework is to require banks to produce disclosures that allow market participants to assess the scope of application by banks of the Basel Committee's framework and the rules in their jurisdiction, their capital condition, risk exposures and risk management processes, and hence their capital adequacy. Pillar 3 requires all material risks to be disclosed, enabling a comprehensive view of a bank's risk profile.

Pillar 3 disclosures

HSBC JOH's Pillar 3 disclosures at 30 June 2020 comprise all information required under Pillar 3, both quantitative and qualitative. HSBC Group has implemented the Basel Committee on Banking Supervision ('BCBS') final standards on revised Pillar 3 disclosures issued in January 2015. HSBC Holdings plc & HSBC Bank plc publishes comprehensive Pillar 3 disclosures annually, half-yearly and quarterly on the HSBC website: www.hsbc.com (under Investors), which for the annual disclosures are simultaneous with the release of the Group's Annual Report and Accounts. Pillar 3 requirements may be met by inclusion in other disclosure sources within the wider Group. Where we adopt this 'sign-posting' approach, references are provided to the relevant pages of the Annual Report and Accounts or other location.

Report oversight

HSBC JOH's Executive committee ('ExCo') has the responsibility for the oversight of risk for the Branch. At 30 June 2020, ExCo is satisfied that:

- HSBC's risk, compliance, treasury and capital management generally operated effectively;
- HSBC's business activities have been managed within the ExCo-approved risk appetite; and
- HSBC is adequately funded and capitalised to support the execution of its strategy.

During 2019, ExCo reviewed and approved the disclosure policy, which incorporates the revised Pillar 3 disclosure requirements set out by the BCBS.

The ExCo is satisfied that this report has been prepared in accordance with the requirements of the disclosure policy and that an appropriate control framework has been applied in the preparation of this report.

All disclosures in this report are unaudited.

Leverage ratio

Our leverage ratio calculated in accordance with South African Banks Act, 1990 was 9.27% at 30 June 2020, decreased from 9.8% at 31 December 2019, mainly due to the increase in balance sheet exposures.

| | | | Total adjusted value |
| 21 | Total HQLA | | 36,845 |
| 22 | Total net cash outflows | | 27,951 |
| 23 | Liquidity coverage ratio (%) | | 132% |

The strong liquidity and funding position can be evidenced by the LCR of 132%. The reason for this differing to the above is table is that LIQ1 requires disclosure of the average LCR. HSBC has used a simple average of month end averages over the last 6 months in local currency.

The composition of the HQLA is T-bills and other government securities. As a result of the HQLA all being held in local currency there is a currency mismatch.

As a result of the target market and the number of clients there is a concentration of funding mitigated by large holding of liquid assets. The improvement is largely attributable to business-as-usual mix changes across both advances and deposits.

| 22 | Performing residential mortgages, of which: | - | - | - | - | - |
| 23 | With a risk weight of less than or equal to 35% under the Basel II standardised approach for credit risk | - | - | - | - | - |
| 24 | | - | 12 187 | 16 759 | - | 1 447 |
| 25 | Assets with matching interdependent liabilities | | | | | |
| 26 | Other liabilities: | | | | | |
| 27 | Physical traded commodities, including gold | - | | | | - |
| 28 | Assets posted as initial margin for derivative contracts and contributions to default funds of CCPs | | | | - | - |
| 29 | NSFR derivative assets | | | | - | - |
| 30 | NSFR derivative liabilities before deduction of variation margin posted | | | | 500 | 50 |
| 31 | All other assets not included in the above categories | | | | 6 223 | 6 223 |
| 32 | Off-balance sheet items | | 14 565 | | | 728 |
| 33 | Total RSF | | | | | 15 689 |
| 34 | Net Stable Funding Ratio (%) | | | | | 135% |

JOH exceeded the minimum NSFR regulatory requirement of 100% effective from 1 January 2018, and at 30 June 2020 NSFR is 135%.

The improvement is largely attributable to business-as-usual mix changes between corporate and financial institutional clients across both assets and liabilities.

The primary sources of funding are customer current and savings accounts payable on demand or at short notice.

13 PUBLI

Credit risk

Credit risk is the risk of financial loss if a customer or counterparty fails to meet an obligation under a contract. Credit risk represents our largest regulatory capital requirement. There have been no material changes to our policies and practices, which are described in the Pillar 3 Disclosures at 31 December 2019.

Counterparty credit risk

Counterparty Credit Risk ('CCR') risk arises from derivatives and Security Financing Transactions ('SFTs'). It is calculated in both the trading and non-trading books, and is the risk that a counterparty may default before settlement of the transaction.

Three approaches may be used to calculate exposure values for CCR: Current Exposure Methods ('CEM'), standardised and IMM. Exposure values calculated under these approaches are used to determine RWAs. We use the CEM approach. Under the CEM, the EAD is calculated as current replacement cost plus regulatory addons.

18 PUBLI

Market Risk

HSBC JOH has adopted the Standardised Approach in respect of positions held in the trading book, and currently calculates capital on the current market value of interest rate and foreign exchange instruments held in the Branch's trading books.

The objective of HSBC JOH's market risk management is to manage and control market risk exposures in order to optimize return on risk while maintaining a market profile consistent with the Group's status as a premier provider of financial products and services.

Main market risk exposures in South Africa are:

- Foreign exchange arising from sales and trading of foreign exchange products such as spots, forwards, swaps and options; and
- Interest rate arising from rates trading activity, sale of interest rate products to clients and balance sheet management activity.

There were no material changes to the policies and practices for the management of market risk.
